Appearance : Shri Shobhit Joseph, representative for petitioner.

Shri Abhinav Kardekar and Shri Ayush Solanki, counsels along with Shri D.K. Verma, EE for Respondent CSPDCL.

Shri V.G. Ekka, EE for respondent CSPTCL.

Shri Shrijan Shukla, counsel along with Shri Abhishek Jain, SE for respondent SLDC.

O R D E R

(November 11, 2026)

The petitioner, M/s RAG Ferro Alloys Pvt. Ltd., has filed the instant petition seeking exemption from the requirement of having a dedicated feeder for availing inter-State/intra-State open access for procurement of power from power exchanges, using its existing connectivity through 33 kV RAG Ferro feeder (Non dedicated), emanating from the 33/11kV Jota Substation.

2. The petitioner has impleaded Chhattisgarh State Power Distribution Company Limited (CSPDCL), State-owned Distribution Licensee, responsible for the distribution and retail supply of electricity in the State as Respondent No.1, Chhattisgarh State Power Transmission Company Limited (CSPTCL), is the State Transmission Utility responsible for transmission of electricity within the State as Respondent No. 2 and State Load Dispatch Center (SLDC) as respondent No.3.

Petitioner's submission:

3. The petitioner is having contract demand of 5000 kVA at 33 kV from CSPDCL. It's plant maintains a high load factor and power factor and that providing a separate dedicated feeder would involve avoidable expenditure.

3.1 The petitioner intends to procure a portion of it's power requirement from power exchange through open access from inter-state/Intra-State sources depending on the market conditions. The procurement of power will be only green powers.

3.2 Section 42 of the Act, specifies non-discriminatory open access and mandates the Commission to introduce open access subject to

certain conditions with payment of charges such as cross subsidy charges, open access charges, etc. Further, a provision related to exemption from having dedicated feeder to avail open access under Clause 5(5) of the CSERC (Connectivity and Intra-State Open Access) Regulations, 2011 and subsequent amendment Regulations, 2012 has been specified.

3.3 The petitioner has been maintaining consistently high load factor (average above 82%) within the prescribed norms through installation of adequate electrical systems. Due to such efficient operation, reactive power drawn from the grid remains minimal, feeder current remains lower, technical losses are reduced and no adverse impact is cause on the existing distribution network or other consumers. Hence, the technical necessity of insisting upon a separate dedicated feeder in the present case may kindly be reconsidered and suitable exemption may be granted.

3.4 With the above submission, the petitioner has prayed to grant exemption from the requirement of a dedicated feeder for availing inter-State and intra-State open access, in the interest of justice equity, and efficient utilization of power system resources and permit the petitioner to draw external power through open access using existing connectivity/feeder arrangement, subject to applicable technical and commercial conditions.

Respondent No. 1 - CSPDCL's Reply

4 It is submitted that petitioner has failed to establish any exceptional circumstances warranting exercise of the extraordinary discretionary power under the proviso to Regulation 5(5) of the Open Access Regulations, 2011. Thus, the grant of the exemption from dedicated feeder as sought by petitioner would not only defeat the mandatory regulatory framework governing Open

Access but would also impose substantial technical, operational and financial burdens upon the Respondent, result in loss of business of the petitioner due to under usage of its assets and also put extra burden on it to carry out maintenance of its assets. All these will adversely affect the interests of similarly situated consumer and ultimately increase the tariff burden upon the remaining consumers of the State. The present petition therefore deserves to be dismissed. CSPDCL has also relied on the following grounds for dismissal of the petition:

4.1 CSPDCL stressed on the maintenance related issues such as planning of shut down and its restoration on multi-consumer feeders are within its control, which will be affected if the exemption is granted. CSPDCL would have to pay prior approval from the petitioner for any shut down for operation and maintenance. Further, load management in multi-consumer feeders with open access permission to the petitioner will lead to commercial disputes such as claims related to non-availability of power, scheduling deviations, compensation, etc. which will be burdened upon the respondent and finally be passed on the consumers.

4.2 Exposure of its employee for claims for compensation in case of delay in restoration of supply or any other operational issues as per provisions in para 5.4 of the CSERC (Standard of Performance in Distribution of Electricity) Regulations, 2020.

4.3 Exempting the petitioner from having dedicated feeder for open access will adversely affect the power sale and revenue realization and may lead to substantial financial loss.

4.4 Exemption would encourage the other similar consumer to procure electricity from the third-party generators / power exchanges instead of taking power from the CSPDCL.

Respondent No. 2 - CSPTCL's Reply

5 Respondent No. 2, CSPTCL, has expressed no objection to consideration of the prayer of the petitioner and to grant necessary exemption as per Open Access Regulations, 2011 and its amendments to allow long-term open access, if the petitioner fulfils the following conditions:

(i) Drawl entity shall pay all the open access charges, SLDC charges as per prevailing regulations / tariff order for transaction of power under open access.

(ii) Drawl entity has to make an arrangement for installation of an ABT meter with AMR facility and RTU for online data communication etc. at the point of drawl of power as per prevailing regulations.

(iii) Drawl entity shall not be allowed to lodge any claim in case of failure/under scheduled maintenance/shut down / non operation or emergency grid security measures/ Force Majeure events of multi-consumer HV feeder supplying power to the drawl end due to the reason whatsoever, also agree to load restrictions, if any, imposed by the licensee on the feeders serving them.

(iv) Whether the power to be drawn through Open Access includes conventional power or Renewable power, the drawl entity shall strictly comply with all applicable Regulations, procedures, technical requirements, metering arrangements,

scheduling protocols, energy accounting norms/ deviation settlement mechanisms and payment obligations in respect of drawal of power through Open Access in different scenarios as per CSERC regulations and CSERC orders in different petitions or Suo-motu Petitions.

(v) Drawl entity shall submit an undertaking to the respondents No. 1 & 2 i.e., CSPDCL and CSPTCL regarding condition specified from (i) to (iv) above.

Respondent No. 3 - SLDC's Reply

6 Respondent No. 3, SLDC, in its reply, has submitted that the petitioner's application for SLDC registration had not been received and that telemetry of the petitioner's entity substation was not available with the respondent SLDC. It has accordingly sought directions to the petitioner to comply with the applicable rules and regulations.

Analysis and Decision

Heard the parties and gone through the submissions made by them.

7 The Commission has considered the petition, the replies filed by the respondents and the documents available on record. Clause 5(5) of the CSERC (Connectivity and Intra-State Open Access) Regulations, 2011, as amended, provides for exemption from the requirement of a dedicated feeder for bulk consumers, for reasons to be recorded in writing. Such exemption is subject to the Commission's satisfaction and compliance with the applicable regulatory and technical requirements.

8 The petitioner has agreed to fulfil the conditions placed by the respondents. The petitioner has submitted requisite undertaking in affidavit.

9 The petitioner is presently connected to the distribution system through 33 kV RAG Ferro feeder. The request for exemption is intended to facilitate transactions of power through open access without needing a separate dedicated feeder. As per the details submitted and deliberated thereafter, the petitioner's plant is not located within such industrial area, wherein, the petitioner would encounter RoW issue while erection of the dedicated feeder. The submission of petitioner mentioning corridor and space constraint do not stand justified in this particular case. Hence, the petition is dismissed and disposed of accordingly.
